Labs 11-12

11. Create a countdown application where user can input the number of steps to be counted down and delay (in seconds) between steps. Use AsyncTask and publish both progress percentage and a final message in UI. Adapt observer pattern in your design.

12. Create an application that allows user to input URL, does an HTTP GET to that URL, and counts number of lines, longest line length, and the total size of data read. Use AsyncTask.
